

Arrowhead[®]

Non-Sequential Façade Panel Installation System

Install Any Panel. Anywhere. Any Time.

Every conventional façade system imposes a sequence. Miss a step — a weather delay, a blocked zone, a damaged panel — and entire crews go idle. Arrowhead's patented T-clip system breaks that constraint entirely. Install any panel in any order, skip blocked zones and come back, keep crews productive through any site condition. The result is up to 50% faster installation, hidden fasteners that protect your design intent, and a system your team can master in a morning.

For the Architect

Hidden Fasteners

The T-clip system conceals all connections. Clean sight lines, no exposed hardware, pure modern aesthetics — exactly as specified, regardless of what's behind the panel.

Specify Freely

Compatible with all major ACM brands. Arrowhead doesn't lock you into a single panel supplier — your material choice stays yours.

Full Compliance

AAMA 508/509 tested. Complete TER documentation, CAD details, and 3-part specs for a seamless submittal process.

Three Systems, One Promise

Traditional Rainscreen Aesthetic

The baseline Arrowhead system. Base wall extrusions are shimmed and secured first, then used to measure panels precisely. Panels seat directly onto extrusions, held by T-clips — no sequential installation required. Visually similar to traditional rainscreen systems; recognizable to building officials and envelope consultants.

Best For

Projects with traditional reveal profiles; envelope consultants who want a familiar system aesthetic

Maximum Fabrication Efficiency

All the non-sequential benefits of FLEX plus a simplified rivet-free fabrication process. Panels attach via a double-groove-and-slot method — no rivets required. Fewer fabrication steps mean higher throughput, easier training, and more accurate estimates. Ideal for high-volume projects and shops optimizing for speed.

Best For

High-volume projects; shops competing on labor efficiency; fabricators optimizing throughput

Minimalist Modern Finish

Non-progressive installation with a minimalist aesthetic profile. Shallow reveals and tight panel-to-panel geometry create an almost seamless surface — ideal for architects specifying contemporary, flush-face façades. Easy to fabricate; clean, uninterrupted visual field for the building owner.

Best For

Contemporary designs requiring minimal reveal depth and flush-face aesthetics

All Three Systems Share:

Non-sequential installation | Patented T-clip system | Hidden fasteners | AAMA 508/509 certified | Compatible with all major ACM brands | Stocked and ready to ship
