

Edgeline[®]

Premium Pre-Finished Metal Flashing Material

Your Design, Down to the Last Edge.

The most carefully specified façade can be undone by flashing that doesn't match. Edgeline[®] is Fairview Architectural's pre-finished aluminum flashing material — finished with the identical Vitranar[®] flexible-resin coating as your Vitrabond[®] or Vitraplate[®] panels. Not close. Identical. So every parapet cap, sill, coping, and beam wrap integrates seamlessly with your primary cladding — today and across decades of weathering.

Why Architects Specify Edgeline[®]

Exact Color Match

Same Vitranar[®] batch formulation as your cladding. The same coating ages identically — no differential fading, no visual disruption in year ten.

Single-Source Control

One supplier for panels and flashing. One warranty. One point of accountability. No coordination gaps between vendors, no 'close enough' color disputes on site.

Fabrication Ready

Pre-finished and ready to form. Vitranar[®] maintains elasticity during forming — no cracking, no post-painting, no delay. Standard and custom sheet sizes to minimize waste.

Applications

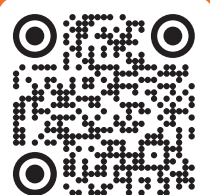

- Parapet caps and coping
- Sill flashing and drip edges
- Beam wraps and slab edge covers
- J-channels and panel receivers
- Custom architectural trim details
- 0.032" (20 gauge) — standard applications
- 0.040" (18 gauge) — enhanced rigidity
- Custom color matching — no additional development fee
- Up to 40-year finish warranty
