INNOVATIVE FLEXIBLE FINISHES

At Fairview Architectural, innovation drives everything we create — and our Vitranar® flexible resin coating system is proof.

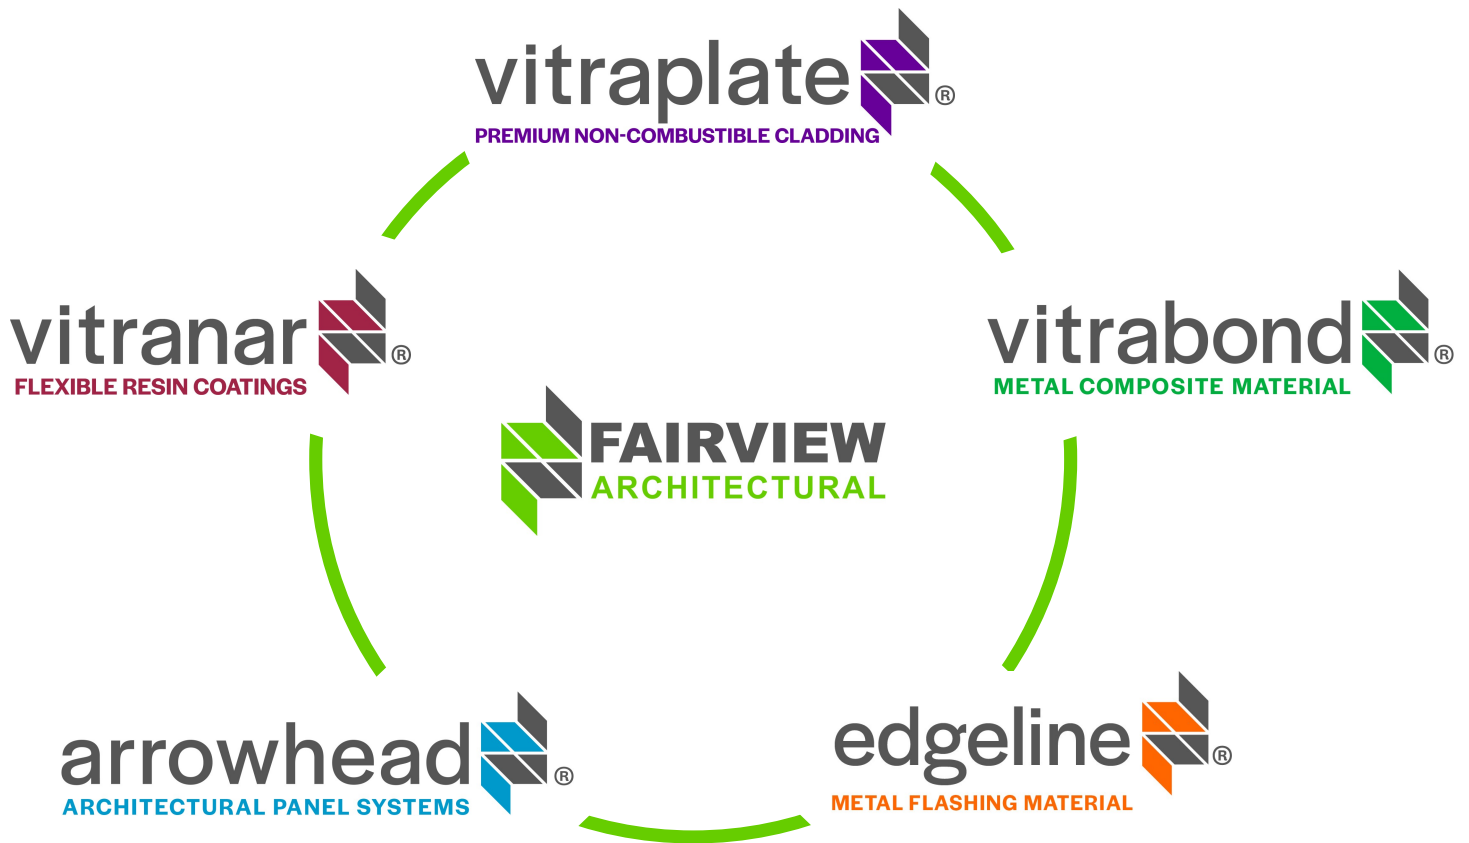

Used across our Vitrabond®, Vitraplate®, Edgeline®, and other prefinished aluminum products, Vitranar® delivers unmatched flexibility, enabling post-fabrication forming of panels up to 3 mm (1/8") thick without cracking or crazing.

Coil-coated for superior consistency and durability, it meets AAMA 2605 and carries warranties of up to 40 years, giving architects and fabricators the freedom to design and build without compromise.

✔ **COIL-COATED**

✔ **FLEXIBLE RESIN**

✔ **AAMA 2605**

WHAT IS COIL-COATING?

Coil-coating is a continuous, factory-controlled process that applies paint on metal coil. It provides unlimited color options, superior adhesion, and high finish durability. Due to its continuous process, coil-coated metal has greater consistency than spray painting.

WHY DO FLEXIBLE RESINS MATTER?

Vitranar[®] flexible resin coatings allow post-fabrication forming of prefinished aluminum on 4mm ACM material and solid aluminum up to 3 mm (1/8") without cracking or crazing. It removes design limits while preserving AAMA 2605 durability and warranties.

WARRANTIES

Fairview coatings are backed by some of the strongest warranties in the industry — up to 30 years for Vitrabond[®] and up to 40 years for our solid aluminum products (Vitraplate[®], Edgeline[®], other thicknesses of solid aluminum). Each finish is tested to meet AAMA 2605 standards, ensuring lasting color, gloss, and performance on every project.
