

The Finishing Touch That Completes Your Vision.

Typical Applications Guide

Every edge, cap, and transition is a statement, whether intentional or not. Edgeline® ensures every statement is intentional.

Available in 0.032" and 0.040" thicknesses and finished with the same premium Vitranar® flexible-resin coating as Vitrabond FR® and Vitraplate®, Edgeline® delivers color-matched precision across every facade application from parapet to sill, beam to slab edge.

One supplier. One finish standard. Zero color-match compromises at ribbon cutting and for decades beyond.

PERFECT COLOR MATCH

Identical Vitranar® coating process; not close, exact. Every edge integrates seamlessly with your primary cladding.

FADE-PROOF CONSISTENCY

Same coating means everything ages together. No differential fading. Your building stays intentional, permanently.

SINGLE-SOURCE SIMPLICITY

One quote, one warranty, one point of accountability, eliminating multi-vendor coordination headaches.

UP TO 40-YEAR WARRANTY

Non-prorated, coastal-approved, transferable finish warranty. Built-in confidence for the long haul.

Typical Applications

Where Edgeline® Delivers the Finishing Difference

Shop Fabricated Trims & J-Channels

Pre-finished in your exact facade color, Edgeline® gives fabricators a seamless starting point for shop-bent trims, J-channels, and receiver systems. The Vitranar® coating maintains flexibility through brake-forming; no cracking, no touch-up, no post-painting delays. Panel terminations arrive on-site color-matched and installation-ready, preserving design intent from the shop floor to final inspection.

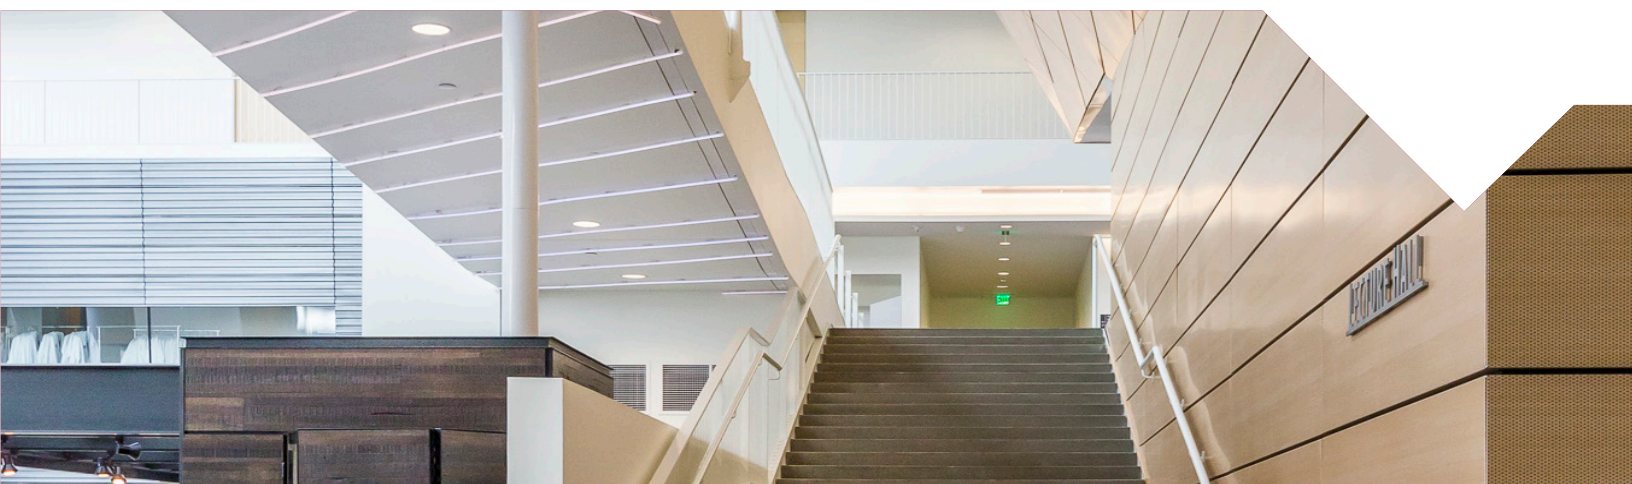

Field Fabricated Accessory Flashing

When conditions demand on-site adjustments, Edgeline® performs. Available in 0.032", 0.040", and other thicknesses, the material is field-workable while maintaining full finish integrity. Installers can form, cut, and fit to meet exact project conditions without sacrificing the color coordination that keeps your facade system looking intentional, not improvised.

Sill Flashing & Drip Edges

Window and door sills are high-visibility, high-exposure details. Edgeline® sill flashing and drip edges protect vulnerable openings from water infiltration while maintaining the clean, continuous color story of your facade. With the same fade-resistance as your primary cladding, there are no mismatched finishes five years down the road; just a building that looks as good as the day it was completed.

Parapet Caps

The parapet cap is one of the most prominent transitions on any facade; it's visible from the street and sky. Edgeline® ensures this critical detail integrates seamlessly with your wall cladding in both color and finish character. Weather-tight, durable, and finished to the same exacting standard as your panels, Edgeline® parapet caps complete the roofline the way the design intended with precision, never compromising.

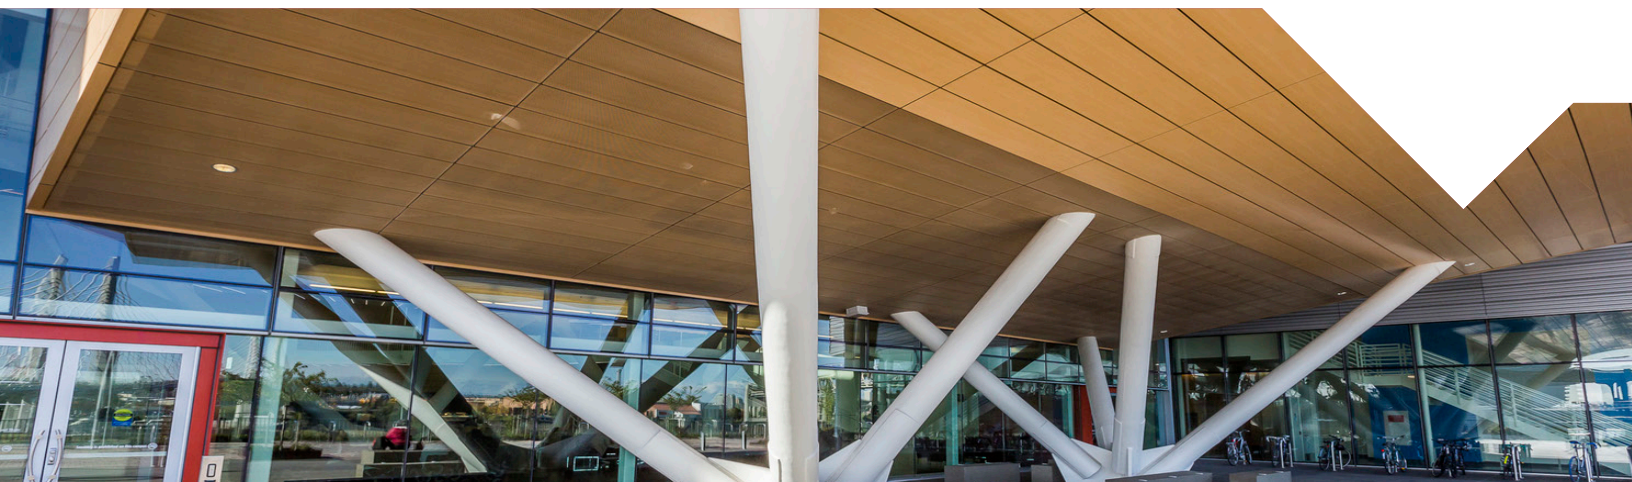

Slab Edge Covers

Exposed structural slab edges interrupt visual continuity if left unaddressed. Edgeline® slab edge covers conceal these transitions with color-matched cladding that bridges floor lines seamlessly. The result is a clean, coherent facade elevation; no jarring material breaks, no contractor-sourced mismatches, just uninterrupted visual integrity from grade to parapet.

Beam Wraps

Exposed structural beams don't have to be an afterthought. Wrapped in Edgeline® material, they become integrated design features finished to match your facade and built to perform in the same environmental conditions. Whether intentional expression or practical necessity, Edgeline® transforms exposed structure from a constraint into a seamless part of the architectural composition.

Edgeline® Product Specifications & Why It Matters

Product Specifications	DETAIL
Material	Aluminum alloy 3003
Available Thicknesses	0.032" (20 gauge) 0.040" (18 gauge) Other thicknesses available upon request
Coating System	Vitrinar® flexible-resin — same formulation as Vitrabond FR® and Vitraplate®
Application Method	Precision roll-coating process
Sheet Sizing	Standard sizes available; custom dimensions to minimize waste
Finish Range	Full Fairview finish library — Solid, Mica, Metallic, Patterned, Textured, Anodized, Natural Metals, and Custom Colors.
In-Stock Lead Time	2–5 business days for in-stock finishes
Warranty	Up to 40-year non-prorated finish warranty; coastal approved; transferable
Technical Resources	Data sheets, CAD details, submittals — fairview-na.com

FEATURED PROJECT

Oregon State University

Custom maple woodgrain finish specified across Vitrabond® cladding panels and all Edgeline® flashing and trim components. Identical coating process. Zero color variation. Complete design integrity from panel face to parapet cap preserved for the building's lifetime.

**Perfect Finishes. Seamless Integration.
 Design Integrity That Lasts.**

Complete your facade vision with flashing that matches perfectly.
